

ATTACHMENT A

CLAIMS

1. (original) A door catch for attachment to swinging cabinet door wherein there is a wheel supported at an outer end of the door characterized in that the wheel has an outer circumference provided by a plurality of radially extending portions adapted to urge against a cabinet frame or side to thereby hold the door closed.
2. (original) A door catch as in claim 1, further characterized in that the radially extending portions are vanes that are aligned so as to be at least approximately parallel to the axis of the wheel.
3. (original) A door catch as in claim 2, wherein the radially extending portions are approximately planar and are aligned so as to be at least approximately parallel to an axis of rotation of the wheel and extending radially from the said axis.
4. (original) A door catch as in claim 3, further characterized in that the radially extending portions are each resiliently deflectable one with respect to the other.
5. (currently amended) A door catch as in ~~any one of claims 1-4~~, claim 1, the radially extending portions are tapered so they are thicker at their base.
6. (original) A door catch as in claim 5, further characterized in that the cabinet door is a multi panel door or a bi-fold door.
7. (original) A door catch as in claim 6, wherein the bi-fold door closes off a corner opening of a cabinet structure.
8. (original) A door catch as in claim 7, further including a body member having a base portion adapted to be secured to an inner surface of the door, a projecting from the base

member supporting the wheel for pivotal movement of the wheel about an axis parallel to the plane of the cabinet door; such that in use, when the cabinet door is being closed, the wheel contacts an inner surface substantially perpendicular to that of the cabinet door and the projecting arm portion is deflected such that the radially extending portions of the wheel urge against the substantially perpendicular inner surface to provide a resistance force against movement of the cabinet door relative to the inner surface so as to hold the door in a closed position.

9. (original) A door catch as in claim 8, wherein the projecting arm portions extends away from an end of the base portion at an angle of approximately 45 degrees.

10. (currently amended) A door catch as in ~~any one of claims 6-9~~, claim 6, wherein the base portion and projecting arm are integrally molded from plastics material.

11. (currently amended) A door catch as in claim 10, wherein the plastics material has resiliently deflectable properties.

12. (original) An improved door catch substantially as hereinbefore described with reference to the drawings.
